Ø 150

Terms of use

Exhaust gas extraction system in closed environment without centralized gas extraction systems

DESCRIPTION

ELEMAX mobile extraction systems are designed to solve the problem of extracting exhaust gases in closed environments, which are not equipped with wall or ceiling fixed extraction systems. Once extracted, the gases are evacuated in the external environment through a flexible hose, given as standard equipment. Various models and accessories are designed for a wide range of use in motorcycles, cars, trucks and vehicles workshops.

FEATURES

Trolley structure in powder-coated steel, fitted on a support equipped with wheels. Simple extraction centrifugal fan joined directly with a single phase electric motor (220/1/50) and electrical connection cable (5 m). Extraction nozzle for exhaust gases extraction (possibility of connection to a flexible hose with rubber nozzle, single or twin exhaust).

ADDED VALUES

Gas spring for assisted movement of the extraction chamber and positioning on the exhaust. Interchangeable accessories, in order to allow different applications on different vehicles.
